Online Learning Management System - Can it be Effective? - Association Management System

Education is not any exception to the evolution of technology and a brand new learning teaching method has brought place although not within classroom walls but within cyberspace.

eLearning provides the exact same teaching course offered by the original schools but it's powered by probably the most information packed medium today, the Internet. Through this, students can study online and their progress are monitored via an application software called online Learning Management System.

This learning managing system is utilized in education, administration and corporate put up due to its multiple functions. It is utilized by colleges and universities to assess and monitor their learning progress of the students that are taking online courses. This method is also employed by corporate companies in training their existing workforce and could be employees. In corporate training, this technique guides the employee through some training program up to designating them for their suitable position on the basis of the assessment of the reports gathered.

The web learning management software represented $860 M market in 2009, this is composed of 60 different providers. The six biggest LMS product companies constitute roughly 50% of the total, smaller product vendors, training outsourcing firm, consulting firms and enterprise resource planning vendors completes the market.

The educational managing system sounds very promising but in line with the survey conducted by American Society for Training and Development or ASTD and the E-Learning Guild, respondents say they are unsatisfied with LMS. The number of unsatisfied purchasers of the system doubled while those who were very satisfied decrease by 25%. Many clients of the internet learning managing system are not contented with the machine they've acquired and they seek advanced versions of their earlier purchased program. Almost a fraction of buyers intended to replace and purchase a new LMS or outsource their LMS functionality over the following 12 months. Probably the online learning managing system couldn't meet the necessity of the education industry; perhaps something is missing from it.

Your competitors is tough nowadays customers are looking for a "complete package" in the merchandise and services they need to purchase. The training managing system can not be looked at as a whole package. Unfortunately even though the LMS has a wide selection of function it still lacks one thing: It cannot provide a unique learning content. The advent of Learning Content Management System cannot be stopped, LCMS it is a more advance version of LMS, it's the exact same function of its prototype system however it can make, store, reuse learning content from a main object repository.

The newly developed Learning Content Managing System has been accepted in the internet learning industry however it still has too much to prove because of it to be looked at as a great online learning managing system. It's features is likely to be put to the test and system flaws will undoubtedly be uncovered, how will LCMS fair? Only time can tell.

About the Author

The teaching and training industry has greatly leaped from the old traditional ways. The rise of the Internet has almost made the original practices obsolete, with an easy click here and click there online research beats going through a lot of books while getting the same information or perhaps a far detailed version of it. Online Association Management System is one of the technological advancement developed for the improvement of the education system, but nevertheless there is always room for improvement and man will continue to produce more complex teaching and learning systems.
