

## Oracle Enterprise Repository & Fusion OER Applications

Oracle Enterprise Repository is a modern repository that has replaced Oracle EBS. OER is used to define the roles and responsibilities of any organization, it enables the storage & management of various types of data like business data, services, assets, and other IT related data. Oracle Enterprise Repository acts as the central source of SOA information.

In OER you can easily map the relationship and interdependence between software assets to SOA and SOA to business objectives.

OER is the most robust repository that plays a very important role in the management of the asset cycle of any organization.

Oracle Enterprise repository plays a very important role in the growth and [Load Interface File for Import](#) development of any organizations like IT software companies, the architect designing companies and many other small to large size business.

You can use OER for Oracle Fusion Applications to get technical information and other data for example tables, services, events, etc. as Oracle Enterprise Repository helps to automate service lifecycle governance.

As you know oracle fusion application is an all-encompassing application web service developed by Oracle. Oracle Fusion ERP is helpful in the handling of a wide range of business tasks like customer relationship management, human capital management, and enterprise resource management.
