Recovery

Fat dissolving injections are a non-surgical and minimally invasive way to reduce stubborn fat from areas like the abdomen, arms, and thighs. These injections use natural ingredients such as deoxycholic acid or phosphatidylcholine to break down fat cells and help you achieve a slimmer figure. The recovery process is usually quick, with most people returning to their normal activities within a day or two. However, it's important to follow your doctor's instructions for post-treatment care in order to ensure the best results and minimize any potential side effects.
