

Fire Extinguisher Servicing Is An Essential Fire Safety Measure

Here we're just discussing fire extinguishers, and fire extinguisher servicing. A fire extinguisher is an energetic fire protection device and may be used to extinguish or control small fires. Portable appliances are not meant to battle huge fires, as that needs to be left to the professionals. Staff should be competed in whether to make use of appliances or not and in that case, in what circumstances. Generally speaking, staff should put safety first and not tackle fires if they are at all well established or spreading fast.

All businesses owners or managers have an obligation to ensure their premises certainly are a safe environment due to their staff and any visitors. Including providing the proper number and kind of fire extinguishers and putting them in the right places. In addition to that, you can find certain steps that you should take to make sure that whenever these appliances are needed, they are going to maintain good working order.

Fire extinguisher servicing ought to be carried out by an experienced engineer. They will check things like perhaps the appliance has been discharged and whether it functions properly. This will inform them if it needs to be filled, or replaced. If it needs to be filled, they will add the appropriate quantity of whatever chemical is in your extinguisher to re-fill it.

This sort of specialist fire extinguisher servicing should really be carried out one or more times per year in your organization premises. You may be found to be in breach of current legislation if you may not service your extinguisher once a year. In addition to this it's also wise to put a method in position to confirm your appliances on an even more regular basis. You're obviously not expected to carry out proper servicing, but it's a good idea to really have a system in place for anyone to bypass all of your safety equipment monthly just carrying out a visible inspection. This will just include checking for basic things such as the extinguisher being where it's allowed to be, checking that it has not been damaged and that the pin is in place and that it has not been discharged. It is sensible to help keep a written record of such inspections.

Let us also consider whether you can find any steps we can take to be sure that our premises are safe from fire. Consider the following suggestions:

You can add fire blankets to your arsenal of fire protection equipment for many areas, such as for example catering kitchens.

You must ensure you've a practical emergency policy for your premises, explaining what everyone should do in a crisis evacuation.

Implement staff training to make sure that your people know where in actuality the fire alarm call points are, and how to use them.

Put an agreement in area for your yearly fire extinguisher servicing and put up your own personal monthly checks.

Ask the fire extinguisher service technician for advise on any issues that arise.

Make sure you have carried out a fire risk assessment and implemented any recommendations.

There should be nothing more important then maintaining your building and your employees safe from a fire. A secure employee is a pleased employee, and a happy employee is just a productive employee. When they see you making sure that your fire safety equipment is working right, they'll believe that you probably worry about them.

About the Author
